

Abstract of the Disclosure

A self-traveling crusher which enables a worker to easy carry out the operation for removing the reinforcing bars that are entangling, jamming and staying between a crushing device and a discharge conveyer relying on a simple structure without transferring the crushing device to an upper part of the machine body. The self-traveling crusher comprises a hopper into which a material to be crushed will be thrown, a crushing device for crushing the material to be crushed that is thrown in, and a discharge conveyer which is positioned at an end on one side thereof under the crushing device and is extending on the other end side thereof outward of the machine to deliver the crushed material to a predetermined height, wherein the discharge conveyer is mounted on the machine body so as to swing up and down with an end on the side of the crushing device as a center, and is supported at an end on the other side thereof by the machine body via lifting means.
